# NextEra Energy Canada Goshen Wind Energy Centre

Community Liaison Committee (CLC): Meeting #1

December 11th, 2014 6:00 p.m. to 8:00 p.m. South Huron Recreation Centre 94 Victoria Street East, Exeter

#### **Introductions**

#### **CLC Members:**

- Cathy Seip
- Stephen Finkbeiner
- Allan P. Barnes
- Stephen Boles
- Gary Eagleson
- Chuck Ford
- James E. Dietrich
- Pat O'Rourke
- Bill Dowson
- Hubert Haccius
- Frank Palen
- Arnold Kester

#### **NextEra Energy Canada:**

- · Nicole Geneau, Director, Development
- · Jeff Damen, Construction
- Bourke Thomas, Environmental Services
- Jeff MacFarlane, Operations Manager
- Derek Dudek, Community/Municipal Relations

#### **CLC Coordinators and Facilitators (AECOM):**

- Avril Fisken
- Adam Wright

Dec. 11, 2014

Page 2

# **Agenda**

- 1. Introductions
- 2. Review purpose, objectives and conduct for the CLC
- 3. Present Goshen Wind Energy Centre and update on project status
- 4. Discuss construction process
- 5. Information requests and items to be discussed at future CLC meetings
- 6. Depositions, if any requests received
- 7. Plus/Delta

# **Purpose of the Community Liaison Committee**

The Ministry of the Environment (MOE) issued a Renewable Energy Approval (REA) in July 24, 2014 for the Goshen Wind Energy Centre. One condition is that NextEra make reasonable efforts to establish a Community Liaison Committee (CLC) and hold at least 2 meetings per year over the next two years.

#### The purpose of the CLC is to:

- Act as a liaison, facilitating two way communication between NextEra Energy Canada and members of the public with respect to issues related to: construction, installation, use, operation, maintenance, and retirement of the Facility.
- Provide a forum for NextEra Energy Canada to provide regular updates on the project and to discuss issues or concerns relating to the construction, installation, use, operation, maintenance and retirement of the Facility with members of the public; and
- Ensure that any issues or concerns resulting from the construction, installation, use, operation, maintenance and retirement of the Facility are discussed and communicated to NextEra Energy Canada.

Page 4

# **CLC Objectives**

- Increase the public's knowledge base of wind energy by providing accurate and up-to-date information on the:
  - Construction
  - Installation
  - Use
  - Operation
  - Maintenance, and
  - Retirement of the Facility

Note: The CLC will not re-visit matters previously raised during the proposal/planning stage for the Facility (e.g. location of a Wind Centre, the *Green Energy Act*, the MOE's approval process, etc.).

- Help NextEra Energy Canada better understand the public's concerns and perception of the risks and effects of wind energy and of the Facility; and
- Engage in meaningful and open dialogue in order to identify opportunities for improvements and mitigation and work towards resolving or minimizing conflicts, as well as gain support/acceptance for the Facility.

## What is expected of CLC Members

**Be Present.** Attendance is critical to an effective Committee. Feel free to send a delegate if you can't attend.

 If the first two meetings are missed, the Chair may require the member to forfeit their position.

Be Prepared. Review any materials, like minutes, sent in advance of the meeting.

#### Be Involved.

- Participate in discussions, working within the terms of membership agreed to in the CLC Charter.
- Bring forward areas of concern or interest pertaining to the construction, operation and retirement of the facility.
- Suggest ways to improve plans and provide constructive feedback on mitigation strategies suggested by NextEra and its staff and specialists.
- Participate in the evaluation of requests for public depositions

**Be Respectful.** Listen to and consider information provided by representatives of NextEra Energy Canada, and the opinions and suggestions of other CLC members.

**Share.** Help NextEra Energy Canada keep people informed about the Wind Energy Centre by sharing your knowledge and perspectives through your existing community networks.

ENERGY CANADA

## What is expected NextEra representatives

**Be Present.** Attendance is critical to an effective Committee.

Be Prepared. Review any materials, like minutes, sent in advance of the meeting.

#### Be Involved.

- Provide the CLC (and the general public) with accurate and up-to-date information on the construction, installation, use, operation, maintenance and retirement of the Facility
- Participate in discussions and provide answers and additional follow-up information
- Through AECOM, provide administrative support for CLC members (e.g., coordination of meetings, photocopying of materials.)

#### Be Respectful.

- Listen to and consider the opinions, concerns and suggestions of the CLC members and depositions made by members of the general public;
- Work within the Charter for the CLC;

**Share.** Post Community Liaison Committee materials to the project website, including Agendas, Minutes and other appropriate information

#### Role of AECOM

#### **As Meeting Coordinators**

- Organize all CLC meetings, including setting Agendas and distribution of meeting information and minutes
- Liaise with NextEra Energy Canada to collect and distribute additional information requested by the CLC members
- Track CLC and public inquiries regarding the Facility to ensure the following meeting Agendas address relevant inquiries (including public depositions)
- Coordinate the posting of any information prepared by or presented to the CLC on NextEra's website

#### As Meeting Facilitators

- Ensure CLC members are provided with information and technical support to allow them to contribute to CLC discussions
- Moderate the meetings to meet the agreed upon Agenda and time schedule
- Encourage constructive and thorough discussion
- Ensure members respect other members and participant's opinions and questions, and that no one interrupts or dominates the discussion
- As Chair, AECOM has the right to excuse or replace any member of the CLC or public observer who is interfering with or disrupting with the CLC meetings
- Oversee the review and selection of public depositions, with input from CLC members

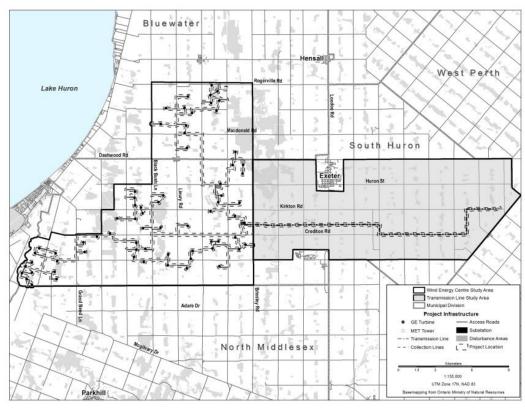

Page 8

# **Overview of the Goshen Wind Energy Centre**

- The Class 4 Wind Facility is being constructed in the Municipalities of Bluewater and South Huron, in Huron County, Ontario.
- The sixty-three turbines, each with 80 metre towers and three blades up to 50.5 metres in length, will have a generating capacity of up to 102-megawatts, capable of generating electricity to power nearly 25,000 homes.
- The project consists of turbines, overhead and underground electrical lines, two met towers, electrical substation, transformer substation (to connect to the Hydro One transmission system) required roads and the construction laydown area.
- The Facility, with the exception of some electrical lines, is being built on privately owned land, which can remain in agricultural use.

# **Project Activities and Status**

#### 1. Planning and Resource Assessments

• Surveying Ongoing – this will happen over the life of

the construction project to support various

needs and ultimately wrap up after

construction with the production of as-built

surveys

Geotechnical Studies and Sampling Complete however there may be more

needed as construction continues

Archaeological Assessments
 All fieldwork is complete and all approvals

have been received

#### 2. Permitting and Clearances

Awarded Feed-in-Tariff contract by the Ontario Power Authority
 April 2011

Renewable Energy Approval (REA) Issued July 2014

Ausable Bayfield Conservation Authority
 Received

Upper Thames River Conservation Authority
 Received

# **Project Activities and Status**

2. Permitting and Clearances (cont.)

Municipality of Bluewater (building permits)
 Received

Municipality of South Huron (building permits)
 Received

Leave to Construct
 Received

Generation License Received

3. Detailed Design

Road Design Complete

Turbine Foundations Complete

Substation Complete

**4. Construction** Began August 2014

**5. Operations** Anticipated to commence 1Q 2015

**6. Decommissioning**To happen at the end of useful life of the project

Page 11

(e.g. after 25 to 30 years of operations)

# **Construction Process and Anticipated Timing**

	2014/2015									
	Complete	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
Land Clearing										
Access Roads & Paths (temporary and permanent)										
Construction Laydown Area										
Turbine Site and Crane Pad Construction										
Turbine Foundations										
Wind Turbine Assembly and Installation										
Underground Electrical Cables										
Electrical Substation										
Above-ground Electrical Transmission Lines										
Meteorological Towers										
Clean up and Reclamation Following Construction										
Repairs to Municipal or Provincial Roads										
Turbine Commissioning (testing and inspections)										

Dec. 11, 2014

# **CLC Meeting #1 – Local Labour**

#### **Construction Stats**

- General Contractor is Borea Construction Canada
- At least 16 Huron County companies used (subcontractors and suppliers) on the Goshen project.
- There were nearly **\$4M** in contracts with subcontractors and suppliers within Huron County.
- Peak volume of individuals on site including subcontractors was around 250.
- Indirect economic benefits have not been measured, but local hotels, restaurants, home improvement stores, gas stations, machine shops, pubs and grocery stores have seen an increase in business since the start of the project.

#### **Projected Economic Impact**

Construction Jobs: 250 at peak

Full Time Operations Jobs: 8 - 10

Capital Expenditures: \$275 Million
Corporate Income Tax: \$168 Million\*
Landowner Payments: \$23 Million\*

# **Construction Progress Images**

# **Construction Progress Images**

# **Operations**

- The operation phase will be approximately 25 years and the operations building, in the Municipality of Bluewater, will require full time staff (i.e., site supervisor and wind technicians).
- Turbines will require scheduled maintenance (i.e., oil change, gearbox cleaning and lubrication, replacement of worn parts). Routine preventative maintenance activities will be scheduled as required, in accordance with manufacturer requirements.
- Spill prevention best practices utilized during the Construction Phase will also be implemented during operational maintenance.
- If unscheduled maintenance of a turbine is required (i.e. component failure), then the turbine will be taken out of service until the repair is complete. Larger trucks and cranes may be required periodically for larger repairs, but this is expected to occur infrequently.
- To monitor subsystems within each turbine and the local wind conditions, a comprehensive control system is installed and networked to the local operator and to NextEra's central operations centre (staff on-site 24/7). The operations building will be notified if an event occurs outside a turbine's normal operating range, and the turbine will be shut down. Turbines can be controlled remotely from the central operations centre.
- Operation decisions based on meteorological data include turbine shut down under icy or extreme weather, and cut-in and cut-out wind speed.

# **Construction and Operations – Local Concerns**

- Turbine Fire: Fire prevention is a key element in wind turbine design with fire prevention systems and other controls. In the unlikely event that a fire should occur, the operator's instruction to plant staff and to local fire fighters is to establish a safety exclusion zone around the structure to provide protection to the plant staff, landowner and the public.
   The operator will work with local fire fighters on fire protection procedures and protocols and these will be communicated with the local community.
- Complaint Resolution Process: The Ministry of the Environment has approved the process whereby Goshen Wind will address and work towards resolving any and all complaints that are received from the public. Should any complaints arise from the construction, operations, and decommissioning phases, a Project rep will contact the complainant within 24 hours to understand and seek a resolution. The project rep will notify the MOE district office of the complaint and prep/file an initial Complaint Record.

Additional information about this process can be found in Design and Operations Report on the Project website:

http://nexteraenergycanada.com/pdf/goshen/Goshen\_D&O\_Rpt\_Final\_Part2.pdf

#### **Additional Items for Discussion**

 How will residents and landowners' concerns be addressed during construction?

Does NextEra foresee any future/additional land requirements?

Potential for community funding/community improvements?

More

# **Tentative Items for Discussion at Future CLC Meetings**

#### **CLC Meeting #2**

- Update on Project Construction and Installation
- Operations and Maintenance
- Other

#### **CLC Meeting #3**

- Post-Construction Activities (e.g., reclamation or required repairs)
- Update on Operations and Maintenance

Dec. 11, 2014

- Monitoring
- Mitigation Measures
- Provisions for Decommissioning
- Other

#### **CLC Meeting #4**

- Update on Operations and Maintenance
- Monitoring
- Mitigation Measures
- Other

# www.NextEraEnergyCanada.com

- Archaeological Reports

- Wind Turbine Specification Report

# **Depositions from Members of the Public**

- The CLC meetings are open to the general public for observation.
- Notices of upcoming meetings will be posted on NextEra's website (<u>www.NextEraEnergyCanada.com</u>). AECOM will also publish Notices in the local newspapers.
- Brief depositions (up to 3 per meeting, at a maximum of 5 minutes each) may be made by members of the general public, providing the depositions pertain to items on the meeting agenda (i.e., the construction, installation, use, operation, maintenance and retirement of the Facility).
- Depositions will be selected at the discretion of the CLC Facilitator and in consultation with the CLC members and NextEra.
- To be considered for a public deposition, a request along with the written deposition must be submitted to AECOM at least one week in advance of the CLC meeting:
