

Cedar Point Wind Power Project Notice of Proposed Project Change

Suncor Energy would like to inform you that the Cedar Point II Limited Partnership has submitted requests to the Ontario Ministry of Environment and Climate Change (MOECC) to amend the Cedar Point Wind Power Project Renewable Energy Approval (REA) in the following areas:

1. An administrative name change from Suncor Energy Products Inc. (SEPI) to Cedar Point II Limited Partnership (CP II LP) on the REA to the Cedar Point II LP.
 - This requested amendment is to reflect Suncor's partnership agreement with NextEra Energy Canada announced in early 2015.
2. A proposed increase to the construction dewatering allowance, as outlined in Condition H1 of the REA associated with turbine foundation construction at turbine locations.
 - This requested amendment is in response to water accumulations at turbine foundation locations.
3. A text amendment in the REA to remove all references to MVA (Mega-Voltage Ampere) ratings associated with the single transformer proposed for the project.
 - This requested amendment is a precautionary measure in the event that we cannot use our primary transformer and seeks the ability for the REA to permit the use of a spare transformer. The spare transformer would meet or be below the sound power levels of the primary transformer which are specified in Schedule B of the REA for Transformer Substation 1 (TS1).

Note: TS1 in Schedule B of the REA currently limits maximum sound power to 103.6 (dBA) for 110 MVA for TS1.

Your feedback is important to us. Should you have any further questions or concerns, please email us at cedarpoint@suncor.com or phone 1-866-344-0178.
